{···}

kill()

Sends a signal to a process or a group of processes.

```
#include <signal.h>
#include <sys/types.h>

/**
 * "pid" is the process ID of the target process. Special values
 *      like "0" (current process group) or "-1" (all processes)
 *      can also be used
 * "sig" is the signal to send (e.g. SIGTERM, SIGKILL)
 *
 * on success, returns 0
 * on failure, returns -1 and sets "errno"
 */
int kill(pid_t pid, int sig);
```
